

SCANMASKIN 28 & 32 WORLD SERIES MOVE EDITION

You know best

Our latest move/edition started out as a concept. The goal was to make your workday easier and less strenuous, without compromising performance. To accomplish this, we felt we had to ask you. Or people like you, entrepreneurs and professionals. You answered, and we listened.

Designed by you

This resulted in our latest floor grinder in the World Series line – the move/edition. It's designed by you and built for you. This will become clear when you try it out – it's 100 lbs lighter and features several ergonomic features that make your job smoother.

Take it for a spin and feel the difference.

A World Series machine

Enjoy the power of a World Series grinder, featuring the same robust cast planetary with unmatched durability. The simplistic design allows for easy and quick repairs on common service items, allowing you to get moving faster than ever.

Don't let the handle control you

With two adjustment points and 360 degrees of rotation on the hand grip, the move/edition handle allows you to always find the most comfortable position. This includes hip support along with high and low positions to accommodate any operator.

New motor

The new move/edition motor weighs less without compromising performance. We've been able to reduce its weight by 50 lbs while offering the same power as before.

New ergo wheel

The move/edition solid wheels are larger in diameter, and provide up to 40% less resistance when moving the machine. When you test the new move/edition, make sure to drive it over thresholds and obstacles. The ease will surprise you.

move/edition

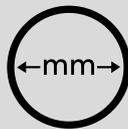

New front wheel

More height, less weight. The move/edition front wheel is a removable transport system designed to reduce head weight and improve mobility. Simply install the 50 lbs wheel into the socket for transport, then remove when grinding. In addition, this removable wheel system provides extra ground clearance for transporting over uneven surfaces

OUR MOST ERGONOMIC GRINDING MACHINE

GRINDING DISC
PLANETARY

GRINDING WIDTH
700 / 800 mm
28" / 32"

WEIGHT
550 / 570 kg
1 212 / 1 256 lbs

The new handle features 2 adjustment points including high and low positions and hip support

The optimized motor weighs 50 lbs less while delivering the same power

Adjust the handle 360 degrees and lock it in the position you want

The new ergo solid wheels increase rolling resistance up to 40%

Improved ground clearance thanks to the detachable front wheel, which reduces weight when removed
